

□ Reflection 1 □

What Dharma Is Not : ధర్మము అంటే ఏమి కాదు

On the recovery of a Sanskrit word that has lost its meaning in translation

A note to the reader. This reflection is a linguistic and historical inquiry, not a polemic. It is not directed at any contemporary conflict, group, or tradition. Its only aim is to recover the original meaning of one Sanskrit word — *dharma* — by examining what it actually meant in the time and place where the *Bhagavad Gītā* was composed. Where the recovery has implications for the present, the reader is left to draw them.

The word that does not translate

The Bhagavad Gītā uses the word *dharma* over thirty times. Not once does it mean "religion" in the modern sense of a system of beliefs that one belongs to in distinction from other systems.

This is not a controversial claim among Sanskrit scholars; it is a settled point of philology. But it is almost entirely unknown to most readers of the *Gītā* in English, because the word "religion" appears so frequently in English translations of the text — usually as the rendering of *dharma* — that the equivalence has come to seem self-evident. It is not.

The English word *religion* carries, today, a very specific set of associations: that the world's peoples are divided into communities defined by competing belief systems; that each such community has its own scriptures, its own deities, its own rituals; that an individual is, by birth or by conversion, a member of one such community and not others; and that the principal way of identifying a person spiritually is to ask, *what religion are you?*

Almost none of this was true — as a way of framing human spiritual life — in the world in which the *Gītā* was composed.

The root √dhr̥ and the seven meanings of *dharma*

The Sanskrit word *dharma* (धर्म) derives from the verbal root √dhr̥, "to hold, to bear, to sustain, to uphold." At its etymological core, the word simply means:

"that which holds things together,"

"that which sustains being,"

"the upholding-principle."

From this single root the word radiates into a constellation of context-dependent meanings. Sanskrit thinkers were entirely comfortable with this multiplicity; classical Indian grammar treats it not as a defect but as a feature of the language's economy. A single word can do the work of many because the context will determine which sense is active.

SENSE OF DHARMA	WHAT IT POINTS TO	EXAMPLE IN USE
1. Cosmic / natural law	The order that holds the universe together — gravity, seasons, causality, the structure of reality.	"The dharma of fire is to burn; the dharma of water is to flow."
2. Moral / ethical law	Right conduct; what one ought to do; the principles that make human life possible.	"Truthfulness is dharma. Non-violence is dharma. Compassion is dharma."
3. Duty of role or station	The obligations specific to one's position in life — as parent, teacher, ruler, friend.	"It is the king's dharma to protect; the teacher's dharma to instruct."

SENSE OF <i>DHARMA</i>	WHAT IT POINTS TO	EXAMPLE IN USE
4. Vocation / calling	The particular work that one's nature equips one to do; one's <i>sva-dharma</i> — own-dharma.	"A warrior's <i>dharma</i> differs from a poet's; both are necessary."
5. Intrinsic nature	The essential character of a thing — what it is, irrespective of what one might wish it were.	"It is the <i>dharma</i> of a river to find the sea."
6. Law / justice	The proper procedure; what is fair, what is binding, what holds society together.	"The court was convened to determine <i>dharma</i> in the matter."
7. Spiritual practice	The path that holds the soul in alignment with reality — meditation, virtue, the search for truth.	"He took up the <i>dharma</i> of contemplation in his later years."

None of these seven senses corresponds to "religion" as a sectarian identity. Notice, in particular, that all seven describe *what one does, is, or upholds* — none describes a *group one belongs to*. *Dharma* is action and nature; it is not membership.

To translate *dharma* as "religion" is therefore not merely imprecise — it is a category error. It is like translating the Sanskrit word for "river" with the English word "passport." Both words occupy meaningful places in their respective languages; neither is the other's equivalent.

When did "religion" become a category?

The English word *religion* derives from the Latin *religio*, which in classical and early-medieval Latin did not mean what it means today. *Religio* in Cicero and Augustine meant something closer to "reverence," "scrupulous observance," or "what binds one in awe." It was a quality of a person's inner life, not the name of a system one belonged to. A Roman would not have said "I am of the Roman religion" any more than a person today would say "I am of the English ethics."

The modern meaning of "religion" — a discrete, named system of belief, distinguished from other such systems, to which one belongs as a member — is a remarkably late development. The historian of religion **Wilfred Cantwell Smith**, in his 1962 study *The Meaning and End of Religion*, argues persuasively that this usage emerges only in the 17th century in Europe, and that it then spreads outward as European nations encounter — and bureaucratically classify — the populations of their colonies.

The very concept "your religion vs. their religion" is, in this sense, a concept of the early modern European period. It is not a concept that the ancient world — Indian, Greek, Egyptian, Chinese, Persian, Hebrew — could have employed, because the underlying framework simply did not yet exist.

Consider what the ancient world had instead:

- In India, one followed a *dharma* — a way of life, a set of obligations, a discipline. One did not "belong to Hinduism," because Hinduism (as a named, bounded entity) did not exist as a category. The word *Hindu* itself is Persian in origin and was used by outsiders, geographically, to refer to anyone east of the Indus river. It became an "identity" only when foreign administrators needed a label.
- In Greece, one honored the gods, observed the festivals, and pursued virtue (*aretē*). Greeks did not say they "had a religion"; they said they were Athenian, Spartan, Theban.
- In ancient Israel, one walked in the way of the Lord — *halakhah*, "the walking." The category of "the Jewish religion" as one religion among several is, again, a much later imposition.
- In China, one cultivated the *Tao* (the Way) or the *li* (proper conduct). Confucians, Taoists, and Buddhists in China did not see themselves as members of competing religions; they often practiced elements of all three simultaneously.
- In the Buddha's time (~500 BCE), the teaching offered was *dhamma* (the Pāli form of *dharma*) — a path, a discipline, a way. The Buddha did not "found a religion." He taught a method.

When, in the 16th–19th centuries, European Christians arrived in India and asked, "*What is your religion?*" — there was no clean Sanskrit answer, because the question presupposed a category Indians had not yet been forced to fit themselves into. Eventually, under sustained colonial pressure, Indians began to use *dharma* as the translation for the foreign word *religion*. This was a pragmatic accommodation. It has been, philosophically, a disaster.

The cost of the mistranslation

Two words were damaged when *dharma* was forced to mean "religion."

The word "religion" was inflated. It came to seem as if "religion" named the deepest possible category of human spiritual life — as if everyone, of every age, must have had one. (They didn't; the category is recent.) This inflation made it natural to suppose that "religions" had always competed with one another in the way they appear to now, and that the central question of any spiritual life was: *which religion is yours?* The Gītā, asked this question, has no answer — because the question is not yet possible inside the text's own framework.

The word *dharma* was shrunk. It came to seem as if *dharma* was just the Indian word for "religion" — as if "Hindu dharma" was simply "the Hindu religion." This shrinkage hollowed out a word that had carried, for thousands of years, the meanings of cosmic order, moral law, personal calling, intrinsic nature, and spiritual practice. A word that could once name the principle by which a river finds the sea was reduced to a label on a census form.

The cost of this double damage is most visible in how the Gītā's verse on *sva-dharma* and *para-dharma* (BG 3.35, repeated at 18.47) is now usually read.

The mistranslated verse

Source	The verse
Sanskrit (BG 3.35)	श्रेयान्स्वधर्मो विगुणः परधर्मात्स्वनुष्ठितात् । स्वधर्मे निधनं श्रेयः परधर्मो भयावहः ॥ <i>śreyān sva-dharmo viguṇaḥ para-dharmāt sv-anuṣṭhitāt </i> <i>sva-dharme nidhanaṁ śreyaḥ para-dharmo bhayāvahaḥ </i>
Common English rendering (philologically inaccurate)	"Better one's own religion , however imperfect, than another's well performed. Better to die in one's own religion than to thrive in another's, which is fraught with danger."
Accurate rendering (faithful to original meaning)	"Better one's own calling , however imperfectly performed, than another's well performed. Better to die in one's own work than to thrive in someone else's , which is fraught with peril."

The Sanskrit words *sva* and *para* mean simply "own" and "other-than-self." They do not carry the tribal-collective sense that the English word "religion" automatically imports. *Sva-dharma* is the calling, vocation, role, and intrinsic nature that belongs to a particular person at a particular moment of their life. *Para-dharma* is someone *else's* calling — a life that is not yours, work that is not yours, a role that does not arise from your own nature.

What the verse actually warns against, then, is **inauthenticity** — the temptation to live another's life because it appears easier, more prestigious, or more profitable than one's own. It is a verse against imitation, against pretense, against the slow ruin of a self that is trying to be what it is not.

The translation problem is not new — evidence from antiquity

Everything said so far might give the impression that the difficulty of translating *dharma* is a relatively modern problem — a colonial-era misadventure that began when European Christians, with their bounded sense of "religion," tried to fit Sanskrit terms into a category these terms were never meant to inhabit. The historical record tells a more interesting story. The translation problem is not new at all. It is, in fact, as old as the first sustained translation effort between Indian thought and any Western language. The first translators to confront *dharma* wrestled with it for the same reasons we still do — and they were Greek, and they were working in the third century BCE.

Megasthenes at the Mauryan court (c. 302 BCE)

Around 302 BCE, the Seleucid ruler Seleucus I Nicator sent an ambassador east to the court of Chandragupta Maurya, the founder of the first pan-Indian empire. The ambassador's name was **Megasthenes**, and the book he wrote on his return — the *Indica* — was the first serious Greek attempt to describe Indian culture, philosophy, and political life. The original text is lost. What survives are extensive fragments preserved in the later works of Arrian, Strabo, and Diodorus Siculus. These fragments are the earliest extant record of a Greek mind trying to translate Indian categories.

Megasthenes did not have the methodological equipment of a modern philologist. But he had a working knowledge of the languages, direct access to the Mauryan court for several years, and the considerable resources of a sustained diplomatic mission. What he produced is the first known data point on the question: *which Indian categories translate easily into Greek, and which do not?*

The answer is striking and falls along a clear pattern. Of the four classical aims of human life in the Indian framework — the *puruṣārtha*: *artha*, *kāma*, *dharma*, *mokṣa* — two translated readily into Greek, and two did not. The two that translated readily were those for which Greek thought already had robust categories; the two that resisted were those for which Greek thought had no real equivalent at all.

INDIAN TERM	CLOSEST GREEK ATTEMPT	FIT	WHY IT DID OR DIDN'T WORK
<i>artha</i>	<i>χρήματα</i> (<i>chrēmata</i>) — "wealth, affairs, useful things"	✓	A close, almost natural fit. Greek thought had a developed vocabulary for material wealth and practical statecraft. Aristotle's <i>Politics</i> and <i>Nicomachean Ethics</i> are full of equivalents. Megasthenes had no real difficulty here.
<i>kāma</i>	<i>ἡδονή</i> (<i>hēdonē</i>) — "pleasure"; <i>ἔρως</i> (<i>erōs</i>) — "desire"	✓	Equally easy. Greek philosophy had centuries of careful thought about pleasure, desire, and erotic longing — from the pre-Socratics through Plato's <i>Symposium</i> and the later Hellenistic schools. The mapping was clean.
<i>dharma</i>	<i>νόμος</i> (<i>nomos</i>) — "law" <i>δίκη</i> (<i>dikē</i>) — "justice" <i>ἔθος</i> (<i>ethos</i>) — "custom" <i>εὐσέβεια</i> (<i>eusebeia</i>) — "piety"	✗	No single Greek word fit. Megasthenes used several, each capturing one facet but missing the rest. <i>Nomos</i> caught the legal sense but missed the cosmic and personal-calling senses. <i>Dikē</i> caught justice but missed intrinsic-nature and ritual. <i>Ethos</i> caught custom but missed the metaphysical depth. <i>Eusebeia</i> caught reverence but missed everything secular. The concept of an ordering principle that was simultaneously cosmic, moral, ritual, social, and personal — held in a single word — was not available in Greek.

INDIAN TERM	CLOSEST GREEK ATTEMPT	FIT	WHY IT DID OR DIDN'T WORK
<i>mokṣa</i>	<i>no single Greek word; described by circumlocution</i>	✗	The Greeks knew of philosophical liberation (Plato's <i>Phaedo</i> , the Stoic <i>apatheia</i>) and immortality of the soul, but had no concept matching the Indian idea of liberation <i>from the cycle of rebirth itself</i> — because the framework of repeated incarnation was not part of mainstream Greek metaphysics. Megasthenes resorted to describing the practice (ascetic withdrawal, philosophical knowledge) rather than naming the goal.

This is a precise empirical finding, hiding in plain sight in the fragments of a lost book. The terms that named categories Greek thought already possessed translated cleanly. The terms that named categories Greek thought did not possess — dharma and mokṣa — did not. The difficulty was not linguistic; it was conceptual. There was no Greek word for dharma because there was no Greek category of dharma to put a word against.

Aśoka's own translators reach the same conclusion (c. 250 BCE)

Half a century after Megasthenes, the Mauryan emperor **Aśoka** — Chandragupta's grandson — undertook one of the largest translation projects of the ancient world. After the Kalinga war, Aśoka renounced military conquest, embraced Buddhist principles, and ordered his ethical and administrative edicts to be inscribed throughout his empire and beyond, in whatever local language would reach the inhabitants. In the northwestern reaches of the empire — modern Afghanistan, Pakistan, and the border regions — this meant Greek and Aramaic, the languages of the Hellenistic and Persian-derived populations who had settled there in the centuries after Alexander.

The most important survival from this project is the **Kandahar Bilingual Rock Inscription**, discovered in 1958 at Old Kandahar in Afghanistan. It carries one of Aśoka's edicts in two languages, side by side: Greek and Aramaic. The Greek text was almost certainly produced by translators from the local Greek-speaking community, working under royal sponsorship, with direct access to Aśoka's officials. They had every resource a translator could ask for. Their problem, then, is the historian's gold: it is the problem of an empire trying to render one of its central terms into Greek, with no shortage of effort, talent, or stakes.

The word at the heart of every Aśokan edict is *dhamma* — the Pāli (and Prākṛit) form of *dharma*. It appears, by some counts, over 100 times across his inscriptions. The Greek translators had to choose what word to use for it. Their choice is now part of the documentary record.

Kandahar Bilingual Rock Inscription · c. 258 BCE · opening lines (Greek)

δέκα ἐτῶν πληρή[θ]εντων βασι[λ]εὺς Πιοδασσης εὐσέβεια[ν ἔδ]ει[ι]ξεν τοῖς ἀν[θ]ρώποις...

(*dēka etōn plērēthentōn basileus Piodassēs eusebeian edeixen tois anthrōpois...*)

"Ten years (of reign) having been completed, King Piodasses [Piyadasi, i.e. Aśoka] **showed eusebeia** to humans..."

The original Prākṛit underneath this Greek almost certainly read dhamma — "King Piyadasi showed dhamma to men." The Greek translators rendered dhamma as εὐσέβεια (eusebeia) — "piety, reverence toward gods, parents, and elders." It was their best available approximation. It was not, and could not have been, an equivalence.

The choice of *eusebeia* is itself revealing. The translators reached for a Greek word that named a specific virtue — the reverent attitude toward divine, paternal, and traditional authority — and used it to stand in for a Sanskrit term whose semantic field is at least seven times larger. The result is a translation that captures one facet of *dharma* (its reverence aspect) while quietly losing the other six: the cosmic, the legal-juridical, the role-specific, the intrinsic-nature, the vocational, and the spiritual-practice senses. A Greek reader who knew only the inscription would come away with a picture of Aśoka as a pious king in the conventional Hellenistic mode. They would have no inkling of the wider conceptual structure within which the Indian word lives.

What this evidence proves

The Megasthenes fragments and the Kandahar inscription, taken together, establish three things that are easy to miss if one only reads modern translations.

First: the translation problem with *dharma* is not a colonial artifact. It is intrinsic to the word and to the framework the word names. It was already present in the very first attempt to translate the term into a major non-Indian language. The European translators of the seventeenth, eighteenth, and nineteenth centuries who rendered *dharma* as "religion" were not the first to compromise. They were, at best, the latest in a 2,000-year tradition of approximation — and the unluckiest, because they did so under conditions in which the approximation could be weaponized.

Second: the difficulty is not linguistic but conceptual. Greek had perfectly serviceable vocabularies for wealth, pleasure, justice, piety, law, custom, virtue, and the philosophical life. What it did not have was a single concept that bundled cosmic order, moral law, role-specific duty, intrinsic nature, vocation, and spiritual discipline into one continuous category. The Indian framework contained a category that the Greek framework simply lacked. That is not a verdict on the relative sophistication of either; it is just a fact about how the two civilizations

carved up the conceptual world differently. But it does mean that any translation of *dharma* into any Western language — Greek, Latin, English — is necessarily a compromise.

Third — and most quietly important: the translation gap is itself historical evidence of authentic encounter. If the Indian categories had translated easily, the Greeks (and later, the Latins, and later still, the English) would have folded them into existing vocabulary and forgotten that any difficulty had occurred. The fact that they could not — the fact that Megasthenes struggled, Aśoka's translators settled for *eusebeia*, and modern translators still reach for the inadequate "religion" — is itself a sign that something genuinely new was being met. Categories that translate easily often turn out to be near-duplicates of what the receiver already had. Categories that resist translation often turn out to be the most interesting things in the room.

Anyone who today translates dharma as "religion" is making the same compromise Aśoka's translators made twenty-two centuries ago. The difference is that we now have the philological tools, the historical perspective, and the comparative framework they did not. We are without their excuse.

The proof from the Gītā's own context

The linguistic argument above can be made — and has been made, for centuries, by Sanskrit grammarians — without ever opening the Bhagavad Gītā. But the Gītā gives the linguistic argument something stronger: a proof from its own dramatic situation. Once the verse's own setting is taken seriously, the "religion vs. religion" reading of BG 3.35 becomes not merely inaccurate but *incoherent*. It collapses on contact with the text it claims to be translating.

The proof unfolds in three steps.

Step one: who is speaking to whom

The entire Bhagavad Gītā is a dialogue between two people who belong to the same tradition. Kṛṣṇa is teaching Arjuna. Arjuna is preparing to fight his own cousins. The Pāṇḍavas (Arjuna's side) and the Kauravas (his cousins' side) are not adherents of different religions. They worship the same gods. They follow the same Vedas. They observe the same rituals. They have intermarried for generations. They speak the same Sanskrit and trace their lineage to the same ancestor, King Bharata. The war at Kurukṣetra is a tragedy precisely *because* it is a war among kin — not a war between rival religious communities.

This single fact is fatal to the "religion vs. religion" reading. In the verse's own setting, there is no other religion present anywhere on the battlefield. The Kauravas across the field do not have a different religion from the Pāṇḍavas. They have the same one.

So when Kṛṣṇa, mid-battle, warns Arjuna against *para-dharma* — the dharma that is "not one's own" — he cannot possibly mean "the religion of those across the battlefield." There is no such other religion in the picture. The category does not apply to the situation. The translation that would make it apply is a translation that imports, into the verse, a distinction the verse itself does not contain.

Step two: what Arjuna is actually tempted by

If *para-dharma* in 3.35 cannot mean "another religion," what does it mean? The Gītā itself answers this question — repeatedly, and from its opening pages. Arjuna's crisis, from the first chapter onward, is not a doubt about which religion is best. It is a doubt about whether to remain a warrior at all. He is, in the dramatic action of Chapter 1, about to drop his bow, abandon the field, and walk away to live as a renunciate:

BG 2.5 — Arjuna speaking

*"It is better, in this world, to live by begging than to slay these honored elders.
Even if they have lapsed into desire, they are still my teachers.
If I kill them, what I enjoy here would be smeared with their blood."*

This is what *para-dharma* looks like for Arjuna in the verse's own setting. It is **not** the wrong religion. It is the wrong *life* for him. Arjuna is a kṣatriya — born, raised, trained, and bound by oath to the warrior's calling. He has been preparing his entire life to defend dharma with arms. And what he is being seduced by, in his moment of doubt, is not another god or another scripture, but another *role*: the role of the contemplative who steps away from worldly action. The temptation is real, and in another life it would be honorable. But it is not Arjuna's, and it is not his now.

This is not a one-off interpretation; the entire dramatic arc of the Gītā confirms it. Arjuna returns to this temptation again and again — in Chapter 3 ("if knowledge is better than action, why do you urge me to this dreadful work?"), in Chapter 5 ("renunciation of works or yoga of works — tell me which is better"), and in Chapter 18, the closing chapter, where he asks for one final clarification of the difference between *sannyāsa* (renunciation) and *tyāga* (release). The Gītā's reply, repeated in every chapter, is the same: *your work is the work of action, not of withdrawal. Stay where you actually are. Act from your own nature, not from a borrowed contemplative pose*. Kṛṣṇa says it directly in 3.30, 3.35, 18.47, and finally in the closing instruction of 18.66.

Read this way, BG 3.35 is not a stray verse about tribal allegiance. It is the central diagnosis of Arjuna's entire crisis. The "para" in *para-dharma* points to another *calling*, not another *people*.

Step three: the same verse, today

Once *para-dharma* is understood as "the life that is not yours," the verse becomes immediately legible in lives that have nothing to do with kings, warriors, or fifth-century-BCE India:

- **A natural teacher** who walks away from teaching to take a higher-paying job in finance, because the prestige is greater and the family is pleased — *para-dharma*. The new work may be done competently. It will not be done from the place where the soul actually lives.
- **A born artist** who forces themselves through engineering school because their parents wanted a "practical" child — *para-dharma*. Engineering is not bad work. It is simply not *their* work, and the years spent imitating someone else's life are years subtracted from the one they were meant to have.
- **A reflective soul** who joins a political faction because their friends did, and finds themselves shouting slogans they cannot, in private, fully defend — *para-dharma*. The faction may even be on the side of justice. But the inner motion has been hollowed out, and an unexamined allegiance is not the same as an examined one.
- **A warrior** who, like Arjuna, is tempted by the apparent peace of the contemplative life because the warrior's work has become unbearable — *para-dharma*. The contemplative life is real, and good, and right for some. But it cannot be borrowed as an escape from work that is genuinely one's own. This is the Gītā's original case; every other case is its echo.

In each example, the verse's counsel is the same: stay with the harder honesty. Even an imperfectly lived calling is closer to the truth than a perfectly performed imitation. The verse cuts *across* every life that has ever been lived; it does not divide humanity along tribal lines.

What the verse therefore does *not* say

It is worth being explicit about the readings that BG 3.35 — once placed back in its own context — cannot support. None of the following is available to anyone who has taken the verse's setting seriously:

WHAT BG 3.35 / 18.47 DOES NOT SAY

- ✗ "My religion is better than your religion."
- ✗ "Hinduism is better than Christianity" (or any other comparison of named traditions).
- ✗ "Do not convert. Do not change traditions."
- ✗ "Stay loyal to the community you were born into."
- ✗ "The other community is on the wrong path."
- ✗ "Defend our identity-label against theirs."

Kṛṣṇa and Arjuna belong to the same tradition. They are speaking inside one shared culture, about one shared crisis, with one shared vocabulary. The "para" in *para-dharma* points to another life within that one culture, not to another culture. The verse is a teaching about the authenticity of one person's calling, addressed by a teacher to a student who is on the verge of throwing his own life away by trying to live somebody else's. It is silent on inter-communal disputes — for which it was never composed. To press it into service in such disputes is to mistake its grammar.

This is the proof that the linguistic argument alone could not provide. The seven meanings of *dharma* establish that "religion" was never one of them. The Gītā's own setting establishes that, in the verse where the tribal reading would most naturally be wanted, the verse's own context makes the tribal reading impossible. The two arguments converge on the same conclusion. The conclusion is, in the end, very simple.

What the verse actually says

Read with the word restored, BG 3.35 says something like this:

It is better to do your own work, even badly, than to do someone else's work well.

It is better to die in your own calling than to flourish in someone else's.

The other path — however attractive — is fraught with peril, because it is not yours.

The peril the verse names is not the peril of falling into the wrong tribe. It is the peril of **living someone else's life** — of building a career, a self, a reputation that does not arise from one's own nature, and that therefore will not, when tested, hold. The verse can be heard by an accountant who has always known she was meant to be a teacher; by a warrior who has been pretending to be a priest; by a poet who has been forcing himself to be a soldier because that is what his father was. In every case, the counsel is the same: *be honestly the one you are. Even your imperfect honesty is worth more than another's perfect imitation.*

This is a teaching about authenticity, not about tribal allegiance. It cannot be used to justify staying in a community one has outgrown, refusing to cross a boundary one is called to cross, or denying the legitimacy of another's spiritual path. It says nothing about any of these things. It says only: **be the one you actually are.**

The cost of getting this wrong

The harm done by reading *dharma* as "religion" is not abstract. Whenever a society begins to read the great wisdom texts of any tradition as if they were instructions to defend an identity-label against other identity-labels, three things follow.

First, the texts are reduced. A teaching that originally addressed the deepest questions of human life — *who am I? what should I do? how shall I die?* — is recast as a tribal manifesto, suitable only for fortifying boundaries.

Second, the texts are weaponized. The same verses that, properly read, would call a person inward to honest self-examination, are instead recruited to call them outward against the named other. *Sva-dharma* stops meaning "be yourself" and starts meaning "be against them." The text has not changed; only the reading has changed. But the consequences are real.

Third, and most quietly, the readers themselves are damaged. To read a wisdom text as a tribal weapon is to be deprived of what the text was actually trying to give. A reader who arrives at the Gītā expecting "*my religion better than yours*" will leave with what they brought; they will not have heard what the Gītā actually said. And the Gītā, in the meantime, will continue to say it, quietly, to anyone whose translation does not get in the way.

What is being recovered, not what is being attacked

Nothing in this reflection is an attack on any tradition, any reader, any community, or any translator who has rendered *dharma* as "religion" in good faith. Many of the great twentieth-century translators did precisely that, often because the available English vocabulary did not give them a better option. The remedy is not to blame the translators but to learn what they had no easy way to convey.

What is being recovered is a Sanskrit word with seven meanings and a 3,000-year history. What is being recovered is a verse that was never about tribes. What is being recovered, behind the verse, is a teaching that the Gītā shares with the wisdom literature of every culture that has thought carefully about how to live: **be the one you actually are. Do the work that is yours. Do not imitate. Do not defect to another's life because it looks easier. The road of your own becoming, even when it is hard, is the only one that leads anywhere worth arriving at.**

This teaching is not the property of India, or of Sanskrit, or of any sectarian community. It is the property of anyone who has ever stood at the door of an unlive life and wondered whether to enter. The Gītā has been saying so for two and a half thousand years. The translation has, intermittently, gotten in the way. The translation can be corrected.

The next reflection asks a related question: what does the Gītā itself say about people whose paths and practices differ from the speaker's? Does the text — read in its own Sanskrit, on its own terms — provide any support for sectarian self-righteousness at all? The answer, perhaps surprisingly, is contained entirely within the text's own verses. They will be the only sources cited.

— *the writer, with humility and gratitude.*
